FRG45S

FRG7S

This **Indoor Vertical Compactor System** is the perfect answer to total trash control. Choose from three different models; the one that best suites your needs. All three models offer you superior design and construction, each thoroughly constructed of stainless steel. Realize significant savings with fewer trips to the dumpster and thus fewer collections by your trash hauler, improved security, easier housekeeping, superior sanitation and a quick return on your investment.

Easy to operate saving space and labor costs. Open the chute door, toss in trash into the compaction chamber, close the door and push the start button. Your indoor compactor cycles automatically and is ready for more trash in just a few seconds. Trash is compacted tightly into a cube contained in a heavy-duty plastic bag. Once the bag is filled, the unit alerts the operator to remove the cube and it is now ready for disposal into your conventional trash bin/dumpster. Keylock controls prevent unsafe or unauthorized use of the compactor. The entire unit is UL listed.

With compaction ratios between 5:1 to 10:1, this indoor vertical compactor can dramatically cut your monthly 'loose-trash' waste bills. Indoor vertical compactors are designed for use, at, or near the point of waste generation reducing the amount of times that employees have to haul trash outside of the building.

FRG's Indoor Vertical Compactor System will improve building security and employee safety, control pest problems and clean up mess caused by traditional loose-waste disposal. The Indoor Vertical Compactor System comes equipped with an ozone odor control system.
